

PopPop (.pop) Language Specification

PopPop (ポップポップ) 🍷 is a modern, pipe-oriented programming language designed for data processing.

Philosophy

"Data enters, logic pops, insights expand."

PopPop emphasizes data streams, declarative pipelines, and lazy evaluation, making it ideal for robust and efficient processing tasks.

Syntax Overview

Comments

Comments start with `\\//`:

```
\\// This is a comment
```

Pipelines

Data flows from left to right using the `>>` operator.

```
10 >> Add(5) >> Display.
```

Streams

Data streams and lists are defined using square brackets:

```
[1, 2, 3] >> Map(x -> x * 2) >> Display.
```

Functions

Custom functions can be defined seamlessly:

```
[1, 2] >> Map(n -> n + 1) >> Display.
```
